

HOW TO CONFIGURE SAML 2.0 FOR YOUATTEST

This setup might fail without parameter values that are customized for your organization. Please use the Okta Administrator Dashboard to add an application and view the values that are specific for your organization.

READ THIS BEFORE YOU ENABLE SAML

Enabling SAML will affect all users who use this application, which means that users will not be able to sign in through their regular log in page. They will only be able to access the app through the Okta service.

BACKUP URL

- Enabling SAML will affect all users who use this application, which means that users will not be able to sign in through their regular log in page. They will only be able to access the app through the Okta service.

YouAttest does not provide backup login URL where users can sign in using their normal username and password. You can contact YouAttest Support to turn off SAML, if necessary.

- The admin account you use to setup SAML in YouAttest needs to also exist in your Okta org. You won't be able to complete the setup if the account with the same username doesn't exist in your org.

SUPPORTED FEATURES

The Okta/YouAttest SAML integration currently supports the following features:

- SP-initiated SSO
- IdP-initiated SSO

For more information on the listed features, visit the [Okta Glossary](#).

CONFIGURATION STEPS

- 1 From the Okta admin console, navigate to **Security > API**:

- 2 Click **Create Token**. Add a name for your new API token, then click **Create Token**:

- 3 Make a copy of your API token; you will enter this later in YouAttest.

- 4 Log in to your YouAttest account as an admin.

Note: As mentioned at the beginning of these instructions, make sure that an account with the same username exists in your Okta org.

- 5 Navigate to **API Integrations > Add API**:

- 6 Enter the following:

- **Friendly Name:** Enter a name for your new API integration.
- **Okta Url:** Copy and paste the following:

Sign into the Okta Admin Dashboard to generate this variable.

- **API Key:** Enter the API token you saved in step 3.
- **Enable Single Sign-on:** Check this option.
- **Select the preferred SSO method:** Choose **SAML**.
- **SAML Entity ID:** Copy and paste the following:

Sign into the Okta Admin dashboard to generate this value.

➤ Click **Save**:

Add a New OKTA Integration

SIGN ON METHODS

The sign-on method determines how a user signs into and manages their credentials for an application. Some sign-on methods require additional configuration in the 3rd party application.

Application username is determined by the user profile mapping. [Configure profile mapping](#)

SAML 2.0 is the only sign-on option currently supported for this application.

SAML 2.0

Default Relay State
All IDP-initiated requests will include this RelayState

Disable Force Authentication
Never prompt user to re-authenticate.

SAML 2.0 is not configured until you complete the setup instructions.

[View Setup Instructions](#)

[Identity Provider metadata](#) is available if this application supports dynamic configuration.

ADVANCED SIGN-ON SETTINGS

These fields may be required for a YouAttest proprietary sign-on option or general setting.

Entity ID
Enter your Entity ID. Refer to the Setup Instructions above to obtain this value.

CREDENTIALS DETAILS

Application username format

Update application username on

Password reveal Allow users to securely see their password (Recommended)

Password reveal is disabled, since this app is using SAML with no password.

Save

8 Done!

NOTES

SP-INITIATED SSO

- 1 Go to <https://console.youattest.com/checkorg>
- 2 Enter **Your Site Address**, then click **Submit**:

YOU ATTEST

Please enter your organization's address. We'll send you to your own login page, where you can access your account directly.
